miSales Developer Sales Charts

The Privacy-First App Store Sales Dashboard That Actually Respects Your Data

Every morning, thousands of indie developers open App Store Connect and immediately regret it. Between the slow load times, buried menus, and confusing charts, checking yesterday's sales feels like work. Existing third-party solutions promise convenience, but at what cost? Your financial data uploaded to someone else's server?

miSales changes that. It's a native iOS, macOS, and visionOS app that brings your App Store Connect sales data directly to your home screen—with widgets, daily notifications, and zero compromises on privacy.

Introducing miSales—App Store Connect data, minus the friction, with all the privacy. Built by indie developer Mike Milinazzo, miSales is a native Apple platform app that displays your App Store sales, proceeds, and refunds through widgets, notifications, and a clean dashboard—all while keeping your data on-device with Keychain and Secure Enclave protection.

What makes it different:

🔒 **Privacy-first architecture**—your keys never leave your device

🏠 **Home screen widgets** show today's revenue without opening the app

📊 **At-a-Glance Dashboard** track sales, proceeds, and refunds

💱 **Multi-Currency** support for sales conversions & data display

🔔 **Automatic notifications** delivered daily

🎭 **Demo mode** lets you try the full app with realistic data

🆓 **Freemium model** with fully-functional free tier

🌐 **Cross-platform**: iPhone, iPad, Mac, Vision Pro

Available now on the App Store.

Built by an Indie, for Indies
miSales was created by Mike Milinazzo, an indie iOS developer who was tired of the friction in checking his own app sales. "I was tired of the choice between App Store Connect's friction and third-party services that required uploading my sales data to their servers," says Milinazzo. "Why should checking my revenue require trusting someone else with my financials? miSales proves you can have both convenience and privacy."
